Leaf Rubbings

Did You Know You Can Copy Leaves?

Here's what you'll need:

- crayon or marker
- Paper (not cardstock or thick paper)
- Leaves
- Tape (optional)

Place the leaf you want to copy on a table. It's sometimes easier to tape the edges down, but not necessary.

Then place the paper over the leaf and press it firmly in place.

Then, press your crayon or marker back and forth on the paper until you feel your marker hitting both edges of the leaf.

Do this several times until you can colored enough of the paper to show a print of your leaf. You can find some examples in the resources folder.

You just made a copy of a leaf!
