Investigative Prompt

On your next outing, find in a safe nature space, try to find a place with tall grass or undisturbed rocks. See if you can catch and insects or bugs!

Helpful tips:

- Use a pillow case for flying insects in a swooping motion
- Use tupperware to contain your bug while you investigate it
- Be gentle when closing the lid to avoid squishing any legs or antennae

What did you find?

Use some of the guides in the investigative folder to help you identify what you caught and see if you can tell if it is a true insect or not. You can also journal a description of the insect or draw a picture for further study.

Bonus challenge: see if you can find all four pieces to your bug's habitat (food, water, shelter, and space).
